Project Team

Project Manager: Thea Yvonne P. Sorro
Lead Programmer: Esrah B. Binobo
UI/UX: Analuisa C. Villanueva
Documenters: Jeryl Alma Mae A. Dagunan & Hanah Sophia G. Palacio
Client: Fernando M. Duero
Business: D SpeedWay Car Care Services

1. User Login

Open the D SpeedWay Smart Inventory and Parts Planning System. Enter the registered Email Address and Password, then click **Login** to access the Dashboard.

If the user does not have an account, registration is handled through the account management process. The Login page also provides a **Forgot Password** option.

Forgot Password

Click **Forgot Password**, enter the registered email address, and follow the password recovery process. The system sends a 6-digit OTP code that is used to continue the recovery process.

2. Dashboard

The Dashboard gives the user a quick view of the business's sales, expenses, profit, inventory, and recent transactions.

Quick Actions

Click **New Sale** to open Daily Transaction. Click **Inventory** to open Products and Stock.

Summary

Revenue shows today's revenue and number of sales. **Expenses** shows today's expenses and provides access to expense management. **Net Profit** is Revenue minus Expenses. **Labor Today** shows today's labor revenue and parts revenue.

Dashboard Charts and Monitoring

The dashboard includes Monthly Revenue, Monthly Expenses, Net Profit, Transactions, Revenue Trend, Revenue Split, Top 10 Products Sold, Payment Methods, Stock Level Monitor, and Monthly Sales Performance.

Top 10 Products Sold can be checked by quantity or revenue. Payment Methods compares Cash, Online Payment, and Credit. Stock Level Monitor identifies Out of Stock, Low Stock, and OK products.

Recent Transactions and Low Stock

Recent Transactions shows recent sales with date, customer, payment method, parts, labor, and total amounts. Click **View All** to open Sales History. Low Stock Alert shows products that need restocking; click **Restock Now** to open Products and Stock.

3. Daily Transaction

The Daily Transaction page is used to record a new car care service sale.

Transaction Information

Enter the Date, Customer Name, Plate Number, Car Model, and Reference Number. Select the Payment Method: Cash, Online Payment, or Credit.

Parts Used

Click **Add Part** to add a part used in the transaction. Enter or select the Part, Quantity, Unit Price, and Total. Click **Delete** to remove a row. Add Part can be clicked more than once when a transaction uses several parts.

Labor / Services

Click **Add Labor** to add a service. Enter or select the Service, Quantity, Price, and Total. Click **Delete** to remove a row. Multiple labor or service rows can be added.

Expenses and Sale Summary

If needed, click **Add Expense** and enter the Description and Amount. The Sale Summary shows Parts Total, Labor Total, and Grand Total.

Click **Save Transaction** to save the sale. At least one part or labor row is required. Click **Clear Form** to clear the form, or click **Sales History / Back to History** to return to Sales History.

4. Sales History

Sales History displays recorded transactions and provides sales and expense summaries.

Summary

The page shows Total Sales, Today Sales, Today Expenses, Today Net, Month Sales, Month Expenses, and Month Net.

Search and Filters

Search by customer, plate, car model, category, part, or service. A date range and payment method can also be used as filters. Payment methods include Cash, Online Payment, and Credit.

Click **Search** to apply the filters, **Reset** to clear them, or **Export CSV** to export the sales records.

Transaction Actions

The transaction table includes Reference Number, Date, Customer, Plate, Car Model, Parts Used, Quantity, Parts Total, Labor Total, Gross Total, and Payment. Available actions are **View Details**, **Print Receipt**, and **Delete**.

Expenses History

Expenses are displayed separately from sales. Users can search or filter expenses by category and date, then click **Export CSV** to export the records.

5. Monthly / Weekly Reports

The Reports page provides weekly and monthly sales performance information.

Weekly Sales Report

Choose a date and click **Show Week** to display the selected Monday–Saturday period. The report shows Week Products, Week Labor, Week Expenses, and Week Net Sales.

The daily table shows Expenses, Product Revenue, Labor Revenue, Daily Net Sales, and Sales. Daily Net Sales is calculated as Revenue (Products + Labor) minus Total Expenses for that day.

Monthly Summary

The report displays the selected month's Net Sales and provides a Monthly Total for comparison with the weekly figures.

Export

Click **Export CSV** to export the report data.

6. Products and Stock

Products and Stock is used to manage products, monitor inventory levels, forecast demand, record restocking, and manage product categories.

6.1 Search and Category Filter

Search products by name or product code. Filter by All Categories, Accessories, Brake Fluid, Coolant, Engine Oil, Filters, Gear Oil, or Transmission Fluid. The page also shows the total number of products and the number that are out of stock.

6.2 Add New Product

Click **Add New Product**. Enter Category, Product Code, Description, Unit, Unit Cost, Selling Price, Initial Quantity, and Reorder Threshold. Available units are Gallon, Liter, Piece, Box, and Set. Margin is calculated automatically. Click **Save Product** after completing the required fields, or **Cancel** to close the form.

6.3 Product List

The product table displays ID, Category, Description, Product Code, Unit, Cost, Selling Price, Margin, Stock, and Actions. Actions include **Restock**, **Edit**, and **Delete**. Products with zero stock are marked **Out of Stock**. Click **CSV** to export product information.

6.4 Forecasting

The forecasting method uses **Moving Average + Safety Stock**. The current settings use a 5-day Lead Time, 3 units of Safety Stock, and the last 3 months as the data period.

Parts Demand Forecast displays Part Name, Average Used/Month, Forecast Needed, Reorder Point, and Status. Seasonal Demand provides demand information for the last 12 months.

6.5 Smart Reorder and Restock

Smart Reorder Recommendations identify items at or below the reorder threshold. The table shows Category, Description, Code, Remaining Stock, Threshold, Unit, Needed, and Action.

Click **Restock** to record received inventory. Enter the Quantity Received and Remarks, then click **Record Restock**. Click **Cancel** to close the restock form.

6.6 Category Management

Click **Add Category** to create a product category. Enter the Category Name and click **Add Category**. The category list shows the ID, Category Name, and Actions. Actions include **Edit** and **Delete**.

6.7 Vehicle-Brand Parts Search Filter

The Parts selection in Daily Transaction can be narrowed using the vehicle or car model entered by the user. For example, typing **Honda Click** narrows the Parts dropdown to Honda-compatible parts. This makes it easier to find the right part and helps avoid choosing an incompatible item.

7. Expenses Management

The Expenses Management page is used to record and monitor business expenses.

7.1 Add Expense

Click **Add Expenses**. Enter the Date, select a Category (Rent, Salaries, Utilities, Supplies, Equipment, Maintenance, Marketing, or Other), then enter the Description and Amount. All fields are required. Click **Save Expense** to record the expense or **Cancel** to close the form.

7.2 By Category

The By Category section provides a graphical summary of expense amounts. Category Amounts shows the total amount recorded for each expense category.

7.3 All Expenses

All Expenses displays the recorded expense entries. Users can filter by category. The table shows Date, Category, Description, Amount, Added By, and Actions. The available action is **Delete**. Click **CSV** to export expense records.

8. Profile and Users / Accounts Center

The Accounts Center is used to manage profile information, password settings, manager accounts, and system activity.

8.1 Profiles and Personal Details

View the profile name, email address, contact information, and role. The Owner account has full system access. Click **Edit Profile** to update profile information.

8.2 Password and Security

Enter the Current Password, New Password, and Confirm New Password, then click **Update Password**. Passwords are encrypted using bcrypt and are not stored in plain text.

8.3 Edit Profile Info

Update the Full Name and Email Address. The user's Role is displayed. Click **Save Changes** to save the updates.

8.4 Manage Accounts

The Owner can add, edit, or remove manager accounts. Click **Add Manager**, enter the Full Name, Email, Password (minimum 6 characters), and Confirm Password, then click **Create Manager**. Existing manager accounts can also be edited or removed.

8.5 Audit Log

The Audit Log tracks edits and deletions in the system. It displays Date, User, Action, Table, Record ID, and IP Address. Click **Refresh** to update the log.

8.6 Database Backup and Restore

The Owner can use Database Backup and Restore to keep a copy of the system data. The feature allows the Owner to create a backup, view available backup files, download a backup, and restore a selected backup when needed.

8.7 Manager Product Management

Manager accounts can also add and edit products in Products and Stock when they are authorized to do so. The Owner continues to have full system access, including account management and other owner-level functions.

***Note:** Available actions depend on the user's assigned role and access permissions.*

9. Logout

Click **Logout** from the system navigation menu. The current session ends and the user is redirected to the Login Page. To access the system again, enter the registered Email Address and Password and click **Login**.
