Project Team

Project Manager: Thea Yvonne P. Sorro

Lead Programmer: Esrah B. Binobo

UI/UX: Analisa C. Villanueva

Documenters: Jeryl Alma Mae A. Dagunan & Hanah Sophia G. Palacio

Client: Fernando M. Duero

Business: D SpeedWay Car Care Services

1. User Login

Open the D SpeedWay Smart Inventory and Parts Planning System.

Enter the registered Email Address and Password.

Click Login to access the Dashboard.

If the user does not have an account, registration is handled through the account management process. The Login page also provides a Forgot Password option.

Forgot Password

Click Forgot Password.

Enter the registered email address.

The system sends a 6-digit OTP code for password recovery.

Use the OTP process to continue recovering the account.

2. Dashboard

The Dashboard provides an overview of the business's sales, expenses, profit, inventory, and recent transactions.

Quick Actions

Click New Sale to open Daily Transaction.

Click Inventory to access Products and Stock.

Summary

Revenue — displays today's revenue and number of sales.

Expenses — displays today's expenses and provides access to expense management.

Net Profit — calculated as Revenue minus Expenses.

Labor Today — displays today's labor revenue and parts revenue.

Dashboard Charts and Monitoring

Monthly Revenue, Monthly Expenses, and Net Profit.

Transactions — displays the number of transactions.

Revenue Trend — compares daily Revenue, Expenses, and Profit.

Revenue Split — compares Parts and Labor for the current month.

Top 10 Products Sold — can be viewed by quantity or revenue.

Payment Methods — compares Cash, Online Payment, and Credit.

Stock Level Monitor — identifies Out of Stock, Low Stock, and OK products.

Monthly Sales Performance — allows the user to select a month and view daily performance.

Recent Transactions and Low Stock

Recent Transactions displays recent sales with date, customer, payment method, parts, labor, and total amounts.

Click View All to open Sales History.

Low Stock Alert displays products that require restocking.

Click Restock Now to access Products and Stock.

3. Daily Transaction

The Daily Transaction page is used to record a new car care service sale.

Transaction Information

Enter the Date, Customer Name, Plate Number, and Car Model.

The Reference Number is generated automatically.

Select the Payment Method: Cash, Online Payment, or Credit.

Parts Used

Click Add Part to add a part used in the transaction.

Enter/select the Part, Quantity, Unit Price, and Total.

Click Delete to remove a part row.

The user can click Add Part multiple times to add multiple parts.

Labor / Services

Click Add Labor to add a service.

Enter/select the Service, Quantity, Price, and Total.

Click Delete to remove a labor row.

The user can add multiple labor/service rows.

Expenses and Sale Summary

Optionally click Add Expense and enter the Description and Amount.

The Sale Summary displays Parts Total, Labor Total, and Grand Total.

Click Save Transaction to save the transaction. At least one part or labor row is required.

Click Clear Form to clear the transaction form.

Click Sales History or Back to History to return to Sales History.

4. Sales History

The Sales History page displays recorded transactions and provides sales and expense summaries.

Summary

Displays Total Sales, Today Sales, Today Expenses, Today Net, Month Sales, Month Expenses, and Month Net.

Search and Filters

Search by customer, plate, car model, category, part, or service.

Filter by date range and payment method.

Payment methods include Cash, Online Payment, and Credit.

Click Search to apply filters or Reset to clear them.

Click Export CSV to export the sales records.

Transaction Actions

The transaction table displays Reference Number, Date, Customer, Plate, Car Model, Parts Used, Quantity, Parts Total, Labor Total, Gross Total, and Payment.

Available actions include View Details, Print Receipt, and Delete.

Expenses History

Displays recorded expenses separately from sales.

Users can search or filter expenses by category and date.

Click Export CSV to export expense records.

5. Monthly / Weekly Reports

The Reports page provides weekly and monthly sales performance information.

Weekly Sales Report

Choose a date to select the week.

Click Show Week to display the selected Monday–Saturday period.

The report displays Week Products, Week Labor, Week Expenses, and Week Net Sales.

The daily table shows Expenses, Product Revenue, Labor Revenue, Daily Net Sales, and Sales.

Daily Net Sales = Revenue (Products + Labor) – Total Expenses.

Monthly Summary

Displays the selected month's Net Sales.

The report also provides a Monthly Total for comparison with the weekly figures.

Export

Click Export CSV to export the report data.

6. Products and Stock

The Products and Stock section is used to manage products, monitor inventory levels, forecast future demand, process restocking, and manage product categories.

6.1 Search and Category Filter

Search products by name or product code.

Filter by category. Categories are managed dynamically by the Owner in Category Management, so the list of available categories reflects whatever the shop currently stocks.

The page displays the total number of products and the number that are out of stock.

6.2 Add New Product

Click Add New Product.

Enter Category, Product Code, Description, Unit, Unit Cost, Selling Price, Initial Quantity, and Reorder Threshold.

Available units are Gallon, Liter, Piece, Box, Set, or Others (with a custom unit entered manually).

Margin is automatically calculated.

Click Save Product to save the product. Required fields must be completed.

Click Cancel to close the form.

6.3 Product List

The product table displays ID, Category, Description, Product Code, Unit, Cost, Selling Price, Margin, Stock, and Actions.

Actions include Restock, Edit, and Delete.

Products with zero stock are marked Out of Stock; products at or below their reorder threshold are marked Low Stock.

Click CSV to export product information.

6.4 Forecasting

The forecasting method uses Moving Average + Safety Stock.

Lead Time: 5 days; Safety Stock: 3 units; based on the last 3 months.

Parts Demand Forecast displays Part Name, Average Used/Month, Forecast Needed, Reorder Point, and Status.

Status indicates whether a product is out of stock or sufficient.

Seasonal Demand displays demand information for the last 12 months.

6.5 Smart Reorder and Restock

Smart Reorder Recommendations identify items at or below the reorder threshold.

The table displays Category, Description, Code, Remaining Stock, Threshold, Unit, Needed, and Action.

Click Restock to record received inventory.

Enter Quantity Received and Remarks, then click Record Restock.

Click Cancel to close the restock form.

6.6 Category Management

Click Add Category to create a product category.

Enter the Category Name and click Add Category.

The category list displays ID, Category Name, and Actions.

Actions include Edit and Delete.

6.7 Vehicle-Brand Parts Search Filter

The Parts selection in Daily Transaction can be filtered by the vehicle or car model entered by the user. For example, typing a car model such as "Honda Click" narrows the Parts dropdown to Honda-compatible parts. This helps the user find suitable parts more quickly and reduces the chance of selecting an incompatible part.

7. Expenses Management

The Expenses Management page is used to record and monitor business expenses.

7.1 Add Expense

Click Add Expenses.

Enter the Date.

Select a Category: Rent, Salaries, Utilities, Supplies, Equipment, Maintenance, Marketing, or Other.

Enter the Description and Amount.

All fields are required.

Click Save Expense to record the expense.

Click Cancel to close the form without saving.

7.2 By Category

The By Category section provides a graphical summary of expense amounts by category.

Category Amounts shows the total amount recorded for each expense category.

7.3 All Expenses

The All Expenses section displays all recorded expense entries.

Users can filter by All Categories, Rent, Salaries, Utilities, Supplies, Equipment, Maintenance, Marketing, or Other.

The table displays Date, Category, Description, Amount, Added By, and Actions.

The available action is Delete.

Click CSV to export expense records.

8. Profile and Users / Accounts Center

The Accounts Center allows users to manage personal profile information and password settings. Owner-level users additionally manage manager accounts and review system activity.

8.1 Profiles and Personal Details

View the profile name, email address, contact information, and role.

The Owner account has full system access.

Click Edit Profile to update profile information.

8.2 Password and Security

Enter Current Password, New Password, and Confirm New Password.

Click Update Password to save the new password.

Passwords are encrypted using bcrypt and are not stored in plain text.

8.3 Edit Profile Info

Update Full Name and Email Address.

The user's Role is displayed.

Click Save Changes to save the updates.

8.4 Manage Accounts

The Owner can add, edit, or remove manager accounts.

Click Add Manager.

Enter Full Name, Email, Password (minimum 6 characters), and Confirm Password.

Click Create Manager to create the account.

Click Cancel to close the form.

Existing manager accounts can be edited or removed.

8.5 Audit Log

The Audit Log tracks edits and deletions in the system.

The log displays Date, User, Action, Table, Record ID, and IP Address.

Click Refresh to update the log.

8.6 Database Backup and Restore

The Owner can use the Database Backup and Restore feature to protect and manage system data. The feature allows the Owner to create backups, view the available backup files, download backups, and restore a selected backup when necessary.

8.7 Manager Product Management

Manager accounts can also add and edit products in Products and Stock. Managers can use the product management functions to update product information when authorized. The Owner continues to have full system access, including account management, category management, product deletion, database backup and restore, and audit log review.

9. Logout

Click Logout from the system navigation menu.

The system ends the user's current session.

The user is redirected to the Login Page.

To access the system again, enter the registered Email Address and Password and click Login.
